

Perfom-X

Unlock the potential

Layer and Breeder birds play a vital role in the poultry industry by supplying nutritious eggs to meet the dietary needs of consumers worldwide and for producing fertile eggs that hatch into healthy chicks.

Introducing the groundbreaking field of nutrigenomics in poultry production: Perfom-X—a cutting-edge approach that combines the power of nutrition and genetics to optimize the health and performance of poultry.

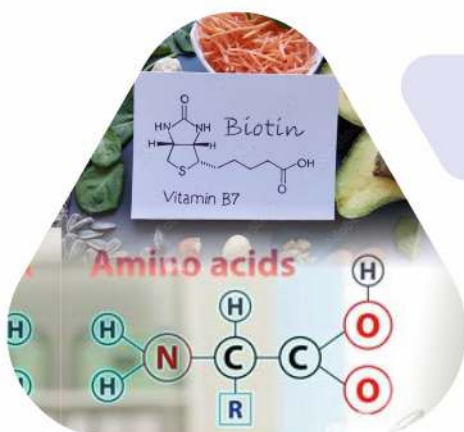

Perfom-X contains a precise blend of Marine algae, Yeast nucleotide concentrate and Micro and Macro nutrient blend tailored to meet the specific needs of laying hens. This scientifically optimized formula ensures that hens receive the ideal nutritional support to thrive and excel in egg production.

Nucleotides are the building blocks of DNA and RNA, essential for cell division, growth and reproduction. During egg formation, there is a high demand for the synthesis of DNA and RNA in developing ova (eggs) and reproductive tissues such as the ovary and oviduct.

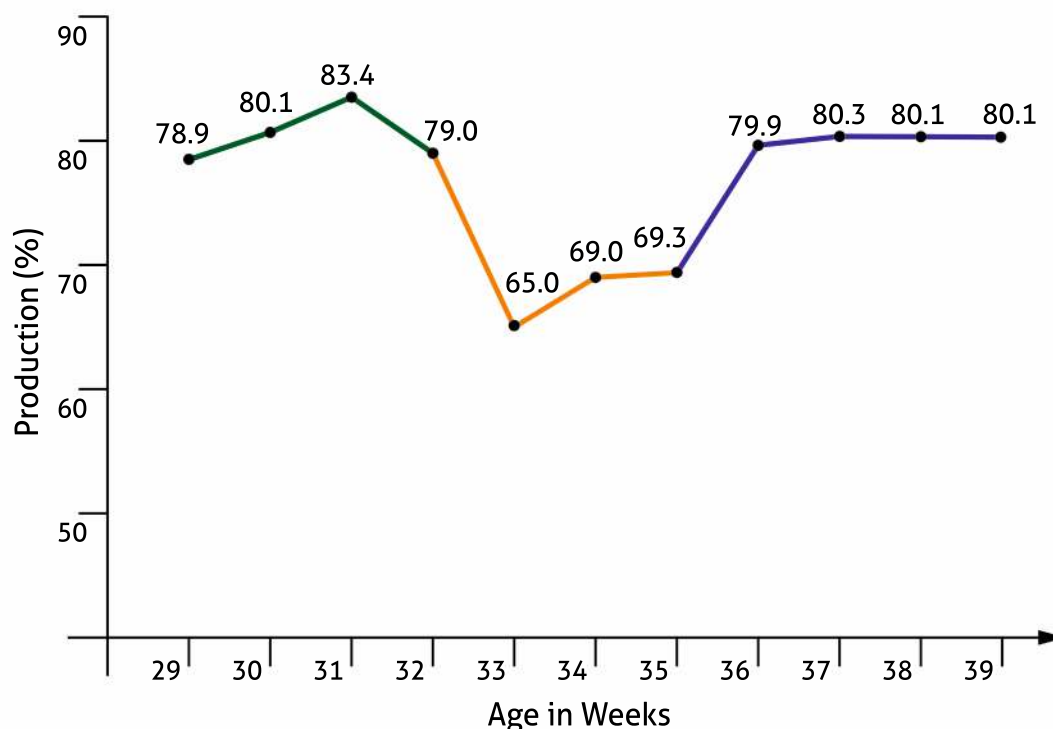

Nucleotides participate in ATP production that support the high metabolic demands associated with egg production, including follicular development, ovulation and eggshell formation.

Improvement in Chick quality and yolk weight due to Linoleic acid content. The bioactive compounds found in seaweed algae are potent Antioxidants: Seaweed algae contain antioxidants such as polyphenols, flavonoids, and carotenoids. These compounds help in reducing oxidative stress in poultry birds, which can positively impact reproductive performance and egg production.

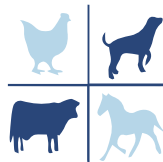

Perform-X is packed with essential nutrients like vitamins, minerals and amino acids, which are crucial for maintaining reproductive health.

TRIAL CONDUCTED IN ILT AFFECTED BREEDER FLOCK NEAR PALLADAM IN TAMIL NADU.

- Production % before ILT infection in the flock.
 - Production % drop due to ILT infection
 - Production % after supplementing PERFOM-X @ the dosage of 2 KG / tonne of feed
- The flock was treated with antibiotics for ILT infection from 33.2 to 34.1 weeks of age.

BENEFITS:

- Increase the growth of follicles and the generation of eggs.
- Helps for the rapid cell division required during egg formation.
- Achieve Higher Hatchability Rates for Optimal Yield and Profitability.
- Revitalize the laying potential with potent antioxidants.

DOSAGE:

Layer, breeder: 500 g / tonne of feed.

Recovery Phase: 1 - 2 KG /tonne of feed.

(or)

As advised by the Veterinarian / Nutritionist.

PRESENTATION:

25 KG

SHELF LIFE:

24 months from the date of manufacture.

*"Fortify the Potential :
Elevate Egg Production and Boost
Profitability with Our Innovative Solutions!"*

(An ISO 9001 : 2015 Certified Company)

GMP & HACCP Certified

Manufactured and Marketed By :

ZENMAK NUTRIGENCIES AND HEALTH PVT. LTD.

Regd. Off: No. F2, Sand Stone Apartments,
14/5, Main Road, Velacherry, Chennai - 600 042.
